

Quality sustainable composite decking, railing and fencing

Environmental Responsibility

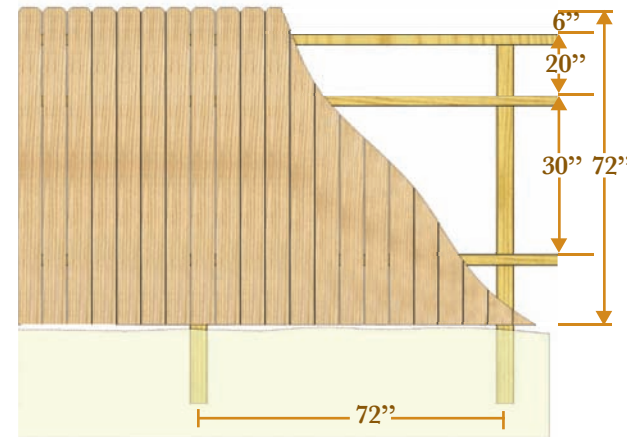

Not only are Natures Composites products engineered as the highest quality composite wood substitute products on the market, but with respect to protecting the environment for future generations to come.

Natures Composites specializes in using recycled HDPE to divert materials from being land filled and to help conserve energy since plastics require a great deal of energy to produce. Natures Composites also uses wheat straw as a superior form of cellulose rather than wood for its natural fiber. Straw forests are annually produced whereas trees at minimum require 10-plus years to harvest and harvesting forests are known to adversely impact their fragile ecosystems.

Natures Composites' manufacturing is based in the United States of America. Natures Composites' product lines are distributed through retail and wholesale channels throughout North America, Mexico, and Europe. Learn more about Natures Composites and our product lines by visiting www.naturescomposites.com today.

Availability and Pricing

Please visit the Natures Composites website at www.naturescomposites.com or call our marketing department at 877-810-4029 for information regarding where to purchase TerraFence™ and TerraDeck™ and to learn about current pricing.

Installation and Product Care

TerraFence™ is as easy to work with as natural wood and if necessary, it can be interchanged with traditional

wood pickets. TerraFence™ can be cut, drilled, routed and nailed using standard hardware and tools. Insert fasteners at least 1" from edges of pickets. Virtually all fasteners are compatible with TerraFence™ however higher quality nails or screws, such as exterior composite fasteners are recommended and are typically available in matching colors. Follow guidelines for best results. Complete installation guidelines and product care instructions may be found at www.naturescomposites.com

Warranty

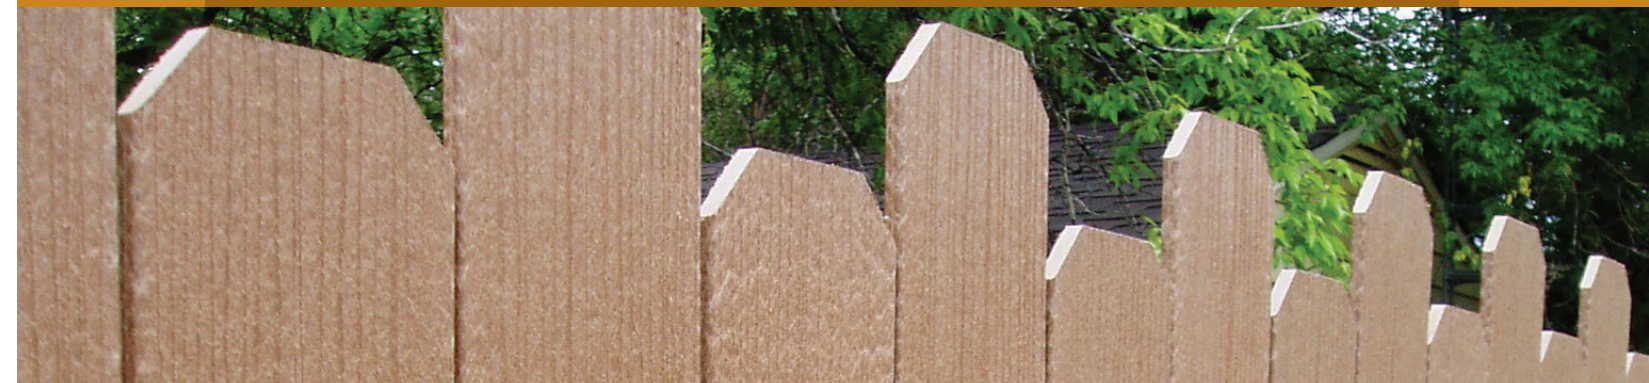

Natures Composites offers a 20 year limited warranty for TerraFence™ and TerraDeck™ products. Warranty qualification requires following product guidelines including rail and post spacing. Please visit www.naturescomposites.com or call 877-810-4029 for the full text and terms of our warranty.

NATURES COMPOSITES™

organic building products

Quality sustainable composite decking, railing and fencing

REMOVING FOOTPRINTS FROM OUR WORLD™

What is TerraFence?

TerraFence™ is a full line of sustainable composite fencing products. The TerraFence™ line allows consumers, contractors and architects to design and build virtually any style of fencing system including, but not limited to privacy, ranch rail and ornamental styles.

The product is made from a proprietary blend of recycled plastic and Wheat Straw. The TerraFence™ line is designed to mirror the look of natural wood fencing- providing a rich, wood grain appearance while offering the long-term durability and low-maintenance benefits of a wood plastic composite or vinyl alternatives.

TerraFence™ is manufactured using rapidly renewable and reclaimed materials. The plastic component of TerraFence™ shields the picket from moisture damage, eliminating potential rotting and splintering found with traditional wood pickets. The wheat straw provides a strong, natural fiber that protects the plastic component from ultra-violet damage and gives the fence the solid, natural feel of wood.

TerraFence™ is designed to look great season after season. It provides a superior and cost effective alternative to Wood, Vinyl and Wood Plastic Composite fencing.

Appearance

TerraFence™ looks like the highest quality wood products with its embossed “wood grain” designs, but does not splinter, rot or decay like wood does.

Color Retention

TerraFence™ retains its color longer and won't fade like traditional wood products. TerraFence™ also resists hard water staining much better than competing products.

Color Choices

TerraFence™ is offered in five popular colors that include: Harvest Cedar, Sequoia, Timber Brown, Ravenwood and Aspen Grey.

Less Maintenance

TerraFence™ doesn't require staining, sealing or painting like wood fences do. Fence owners will appreciate the low maintenance aspects of TerraFence™ and value the many years of service their new fence will provide.

Major Benefits

PRICE

TerraFence™ costs less than most wood-plastic composite fencing systems.

STRENGTH

TerraFence™ is more than twice as strong as the industry's leading wood-plastic composite product.

QUALITY

TerraFence™ looks great and leads the way for producing natural fiber-plastic composites.

A Superior Alternative

TerraDeck™ is a complete decking and railing system line that is a high quality alternative to traditional wood, vinyl and wood composite decking. The unique agri-fiber polymer composite is made from all recyclable and renewable resources and is durable and long lasting. TerraDeck™ is ideal for decking projects and benefits the environment more than other products. TerraDeck™ features embossed wood grain that provides a rich wood look and feel, but does not require the timely and costly maintenance that wood does.

Quality and Strength

TerraDeck™ enjoys all of the same qualities you love about TerraFence™ including its quality appearance, superior fade-resistant colors, lower price, and low level of required maintenance. TerraDeck™ will continue to look handsome year after year thanks to its high caliber construction and natural manufacturing process.
